

This Environmental Policy relates to blu-3 (UK) Ltd (blu-3) operations appropriate to its business of infrastructure provision, in all countries where it operates.

blu-3 is committed to protecting the environment and implementing sustainable practices within its operations to provide a legacy product that will positively contribute to the environment long after operations have been completed.

blu-3 is committed to complying with applicable legislation and other requirements, including those of ISO 14001:2015, that relate to its business and where feasible, will strive to exceed them.

blu-3 is committed to developing a framework for setting environmental objectives as part of its Integrated Management System (IMS) that supports sustainable development, biodiversity and conservation, while ensuring that pollution prevention, resource scarcity and reduction of waste are addressed.

blu-3 is committed to continuing its development and improvement of its environmental management within the IMS to enhance environmental performance by conducting all activities with respect for the environment and through ongoing review of the objectives set within the framework.

This policy is implemented through the IMS, which is maintained in accordance with the requirements of ISO 14001:2015 and will be communicated to all staff, stakeholders and any other interested parties affected by the company's work through the website and any other means available.

It is the responsibility of blu-3 Directors and management teams to implement, monitor and review the effectiveness of this policy. All employees are responsible for working towards the objectives set within this framework and blu-3 encourages the support of all stakeholders in achieving these.

In support of the Environmental Policy, blu-3 will:

- Implement measures to ensure efficient and sustainable use of energy and natural resources by carefully selecting work methods
- Tackle resource scarcity, value natural resources and promote responsible procurement
- Prioritise prevention, reduction, reuse, recycling and implement the waste hierarchy throughout the business
- Reduce waste and greenhouse emissions associated with operations
- Prevent environmental pollution as a result of company operations and actions
- Assess the environmental aspects and impacts of company activities
- Collaborate with clients, subcontractors, suppliers, regulators, professional bodies and the community at large to raise environmental standards within the construction industry
- Engage with stakeholders in the implementation of the objectives
- Provide suitable information and training to all key stakeholders to increase awareness of environmental impacts and opportunities
